## Inspection of Commercial Feedingstuffs

Made for the State Department of Agriculture

By H. A. DAVIS and V. F. STAAB

The University of New Hampshire

Durham, N. H.

#### INSPECTION OF COMMERCIAL FEEDINGSTUFFS

### Made for the

### STATE DEPARTMENT OF AGRICULTURE

The New Hampshire Feedingstuffs Law is administered by the Commissioner of Agriculture. All inquiries concerning the law and the registration of feedingstuffs should be addressed to the Feed Control Supervisor, State House, Concord, New Hampshire.

Under the direction of Honorable Perley I. Fitts, Commissioner of Agriculture, Mr. George H. Laramie, Feed Control Supervisor, and Mr. Harold Ayer, Inspector, collect samples of feedingstuffs offered for sale in the state. During the year ending June 30, 1953, 704 samples were submitted for analysis. These samples represented brands of 143 manufacturers.

### THE LAW

The New Hampshire feedingstuffs law was revised by a bill presented to the 1953 session of the legislature. This bill was passed and takes effect on January 1, 1954. This law is a revision of Chapter 226 of the Laws of the State of New Hampshire and is known as the "New Hampshire Commercial Feed Law". The revised law conforms closely to the Uniform Feed Bill as recommended by the Association of American Feed Control Officials. The law, in addition to retaining the features relating to registration, labeling, and inspection provided by the previous law, incorporates the following features: (1) mineral feeds and mineral supplements must be registered and labeled; (2) the commissioner is given the power to "promulgate and adopt such reasonable rules and regulations as may be necessary" to carry out the law; (3) it gives the commissioner power to issue withdrawal from sale orders and (4) to condemn and confiscate feed not complying with the law; (5) special and custom mixes are exempted from registration and labeling but must comply with the custom or special mix labeling requirement.

Registration: Each brand of commercial feed offered for sale in the state must be registered. The term "Commercial feed" refers to "all materials which are distributed for use as feed for animals, other than man, and for wild birds kept in captivity, except (1) unmixed whole seeds and meals made directly from the entire seeds, (2) unground hay and (3) whole or ground straw, stover, silage, cobs, and hulls when not mixed with other materials."

The feedingstuff is usually registered by the manufacturer or jobber whether he is located within or outside the state. Feedingstuffs manufactured in other states are frequently handled by several middlemen before they reach the local distributor. Under the provisions of the law, if the manufacturer or jobber fails to make registration, the dealer is responsible. Dealers who purchase feed for resale must assure themselves that the brands they purchase are properly registered and the license fee paid; otherwise, they must assume that responsibility. The Feed Control Supervisor provides forms to be filed in his office for the registration of feeds. Copy of this form is shown on page 4.

## New Hampshire APPLICATION FOR REGISTRATION OF COMMERCIAL FEEDINGSTUFFS

To the Commissioner of Agriculture, State Dept. of Agriculture, Concord, N. H.:

No. .....

Date .....

The undersigned hereby makes application mental registration of the following commendation of th	n for registration — reregistration — supple- cial feeding stuffs (for the period ending
(List products to be reregistered under hea SUPPLEMENTAL those products added during t	ding REREGISTRATIONS. List under heading he year.)
Attached are product data sheets which hor attached to the containers of feeding stuffs a Revised Laws of N. H., Stock Foods Law. I he the information required by the law.	
(Enclosed is in the ar registration fee for feeding stuffs. Registration Address correspondence to:	nount of \$ covering the ifee is \$15.00 for each feeding stuffs.)
Attention	Firm Name
Street and No.	Ву

#### INSTRUCTIONS

Application for Registration: Submit cover sheet in duplicate. One copy will be returned as your Certificate of Registration.

Product Data Sheet: One or more (8½" x 11") sheets, to which is affixed a label, or if the label has not been printed, proposed copy or printer's proof may be affixed, for each product to be registered, must accompany the application. Number the attached data sheet pages and insert the page number in parentheses on the cover sheet immediately after the name of the feed.

*Brands*: List these on the application cover sheets under the headings and in order "Reregistrations" and "New Registrations." (Reregistrations are renewals from the previous year. New Registrations are brands not registered the previous year.)

Reregistrations: (Renewals of registrations) require that all cover sheets be renewed. It is not necessary to renew Product Data Sheets except with respect to information which is different from that furnished when the feeds were registered or last reregistered.

Labeling: All labeling must be in accordance with New Hampshire Stock Foods law, and all information on cover sheets and data sheets must comply with the above law.

Labeling: The law requires that any commercial feed offered for sale or sold in this state shall furnish on each package a clearly printed statement certifying:

the number of net pounds in the package

the name and principal address of the person guaranteeing the commercial feed

the name or brand under which the commercial feed is sold

the guaranteed analysis stating:

the minimum percentage of crude protein the minimum percentage of crude fat

the maximum percentage of crude fiber

the name of each ingredient contained in the feed

In specialty cases as in mineral feeds and vitamin supplements requirements as listed in the law must be met. In the case of bulk deliveries a written or printed statement of the above information shall accompany delivery.

In order to secure greater uniformity in the labeling of feeds and in the statement of ingredients, the Association of American Feed Control Officials has adopted definitions of ingredients and standards. The Association has approved 20 official regulations which "should be adopted by State officials insofar as their statutes will permit". There are no conflicts with the New Hampshire feedingstuffs law in these regulations. Manufacturers and dealers are, therefore, expected to conform to the regulations of the Association in all matters not specifically mentioned in the law. A booklet containing these regulations, to-

gether with definitions of ingredients, official and tentative, as well as other instructive material, may be obtained from the Secretary of the Association of American Feed Control Officials, College Park, Maryland. If the definitions and suggestions presented in this booklet are followed by the manufacturer, a correct and accepted list of ingredients complying with the law will appear on the tag. Carelessness or indifference in listing the ingredients should create sales resistance in the buyer. The purchaser will likely conclude that the manufacturer who is inaccurate in specifying the ingredients printed on the tag may be careless in selecting the ingredients he puts into the bag.

### THE PURPOSE OF THE FEEDINGSTUFFS LAW

The chief purpose of the feedingstuffs law is to protect the consumer against the inferior products which doubtless would soon appear on the market if the trade were not under state control. The law is primarily a correct-labeling act. It must not be assumed by the purchaser that every brand which meets the manufacturers guarantee is a high-grade feed. The Commercial Feed Law does not prevent the sale of a low grade feed if it is properly licensed and tagged and is offered for sale in compliance with the law. It would not be in the public interest to legislate against the sale of the lower-grade by-products. They can be fed profitably if bought at a price adjusted to their feeding value. The law does prevent an inferior feed being offered for sale as a high-grade product.

The dealer, in purchasing feed from the manufacturer, and the consumer, in purchasing feed from the dealer, should make the specification that the feed delivered must comply with the New Hampshire Commercial Feed Law. If the feed is not registered; if the protein, fat, and crude fiber are not guaranteed; and if the ingredients of which the feed is composed, are not plainly stated on the bag, or on a tag attached thereto, the purchaser is not protected by the law. He has no recourse under the commercial feed law if the feed he purchases is of inferior quality. If the buyer fails to assure himself that the legal requirements have been met, he accepts the feedingstuff at his own risk.

The cost of a feedingstuffs inspection includes the drawing and analysis of samples, and the publication and distribution of the annual bulletin. The funds from which these costs are paid are accumulated from the license fee which the manufacturer is required to pay annually on each brand registered for sale in the state. A calculation based on the known costs of the inspection and the estimated retail value of the feedingstuffs sold annually shows that the cost of the inspection is only a fraction of a cent per 100-pound bag.

The terms used in reporting the chemical analysis of a feeding stuff required by law are briefly defined as follows: PROTEIN is a collective term for a considerable group of compounds, all of which contain nitrogen. Ingredients high in protein are usually more expensive than the other ingredients, making protein the most important nutrient for consideration in determining the commercial value of a feeding stuff. The nutritional value of the proteins varies, widely; therefore, a feeding stuff should contain protein from several sources to insure inclusion of all essential types. FAT is separated from the other components of a feeding stuff by extracting the moisture-free sample with anhydrous ether. In such ingredients as the cereals, the seed-meals, and animal products, the extract is nearly pure fat. A few ingredients such as alfalfa meal contain some ether soluble material which is not fat. When urea is present, the figure for the percentage of fat found may be high as much as 2/10 per cent, due to the slight solubility of urea in anhydrous ether. When sulphur is present, the percentage of fat found is much too high, since sulphur is readily soluble in anhydrous ether. FIBER is composed of cellulose and related compounds. Since crude fiber has little feeding value, the law requires that the maximum fiber be guaranteed rather than the minimum as in protein and fat.

Bulk delivery of feed direct to the farm is a practice being used to a greater extent. The handling of feed in this manner brings special problems to the consumer as well as to the manufacturer. Experience has shown that by the use of properly designed equipment bulk delivery is satisfactory. The consumer should carefully plan his storage bins and his method of feed distribution before accepting bulk delivery of feed. Feed delivered in bulk is subject to the same requirements so far as the law is concerned as feed sold in bags. The method of drawing an official sample of bulk feed has been a subject of considerable discussion among control officials. The feed control supervisor has drawn samples from five different lots of "bulk delivery" feeds to determine whether differences in analysis would show up when a sample of the same shipment is drawn at different points in the loading, on the truck or unloading of the lot. The analysis of these samples is shown in Table I. These analyses show that a sample drawn at any one of the several points should be satisfactory in representing the lot. Differences between results of the several samples of the same lot are no more than might be expected in drawing the same number of samples from a lot of bagged feed.

TABLE I

### ANALYSES OF SAMPLES OF "BULK DELIVERY" FEEDS

	Brand A			Brand B			Brand C			
Sample Drawn at:	PROTEIN	FAT	FIBER	PROTEIN	FAT	FIBER	PROTEIN	FAT	FIBER	
From mixer into truck	22.28	3.40	4.05	22.20	3.58	7.54	20.92	4.26	3.69	
Composite truck compartments	22.20	3.44	3.96	22.28	3.58	7.64	21.15	4.32	3.77	
Conveyor end, rear truck	22.46	3.39	4.01	22.02	3:59	7.66	21.50	4.24	3.54	
End of screw-end of chute	22.55	3.44	4.20	22.03	3.60	7.53	21.01	4.32	3.60	

	Br	and [	)	Brand E			
	PROTEIN	FAT	FIBER	PROTEIN	FAT	FIBER	
End of screw, from mixer	19.41	4.26	4.79	18.48	3.63	5.01	
From bin into truck (Mill)	19.35	4.25	4.76	18.70	3.63	4.82	
Composite truck compartment	19.01	4.25	4.78	18.80	3.60	4.97	
Conveyor end truck at farm	19.53	4.31	4.76	19.01	3.59	4.95	
Farmer's bin	19.28	4.26	4.60	18.69	3.53	4.76	

The use of medicated feeds for special purposes continues to increase in volume. Special directions for feeding are printed on the tags attached to such feeds. The use of drugs in feeds for the control of certain diseases must be carefully investigated and meet the approval of the Food and Drug Administration before it is put on the market.

It is not within the scope of this bulletin to make recommendations regarding the use of commercial feedingstuffs. The Department of Dairy Husbandry and the Department of Poultry Husbandry are continuously studying feeding problems. The following publications of these departments are free to residents of New Hampshire, Address your request to Mail Service, University of New Hampshire, Durham, New Hampshire.

Ext. Bull. 67	Turkey Production in New Hampshire, 16 pp.
Ext. Cir. 274	Brooding and Rearing Chickens, 20 pp.
Ext. Cir. 282	Dairy Calves.
Sta. Bull. 401	Feed Standards for N.H. Broilers.
Ext. Bull. 114	Feeding Dairy Cattle.

While the word feedingstuff does not appear in all the above titles, no publication is included which does not discuss some aspect of the use of feedingstuffs.

Inquiries occasionally are made regarding a method of calculating the protein, fat or fiber content of a home mixed feed. There are tables available, such as those in Morrison's book "Feeds and Feeding", which give the average chemical analysis of feed concentrates, roughage, and silages. It should be pointed out that the chemical analysis of a particular lot of an ingredient may be somewhat above or below the average figure shown in the table. This fact must be taken into consideration in fixing guarantees. The following example shows how the protein content of a feed mixture may be calculated.

	Pounds used	Per cent Protein in x Ingredient	lbs. protein furnished by = Ingredient
Ground Oats	200	12.0	24
Ground Corn	400	8.0	32
Gluten Feed	300	25.0	75
Wheat Bran	400	15.0	60
Linseed Oil Meal	100	34.0	34
Salt	10		
Total Mix	contains	1410 lbs.	225 lbs. proteir

The mixture contains 
$$\frac{225}{1410}$$
 x 100 = 15.95% protein.

The percentages of fat or fiber may be calculated in a like manner by substituting the fat or fiber figures for those of the protein.

#### CONFORMITY TO THE GUARANTEES

The chemical analyses were made by the methods of the Association of Official Agricultural Chemists. Of the 704 samples analyzed, 656 were mixed feeds and ingredients, 23 were canned cat and/or dog foods, 22 were drawn in a study of the sampling of "bulk delivery" of feeds and three were special problem samples. Forty-six brands were sampled at two or more different times during the year.

Of the samples reported in the 1953 inspection, the analyses of which are published in this bulletin, 17.0 per cent contained less than the guaranteed amount of protein, 10.2 per cent contained less than the guaranteed amount of fat and 4.4 per cent contained crude fiber in excess of the guarantee. A comparison of these figures with those of previous years is shown in Table II.

All states have feedingstuffs laws and publish a report. It is common practice to indicate by different type those brands failing by an arbitrary tolerance to conform to the guarantee. There is no common agreement what this tolerance should be. In this bulletin the analytical figures ½ per cent or more below guarantee in protein, ¼ per cent or more below guarantee in fat, and one per cent or more above guarantee in crude fiber are printed in bold face type.

### PERCENTAGE OF SAMPLES ANALYZED IN YEARS 1926-1953 NOT CONFORMING TO GUARANTEES

Year		nt below e in Protein	1	nt below ree in Fat	Per cent high
icai	LESS THAN 0.5 PER CENT	0.5 PER CENT OR MORE	LESS THAN 0.25 PER CENT	0.25 PER CENT OR MORE	cent

1953	4.3	12.7	3.4	6.8	4.4

### REQUEST BY INDIVIDUALS FOR THE ANALYSIS OF FEEDINGSTUFFS

The feedingstuff law requires the Agricultural Experiment Station to analyze only samples of registered feedingstuffs drawn under the direction of the Feed Control Supervisor. It does, each year, however, analyze a considerable number of samples drawn by individuals representing stock purchased by them for their own use. Frequently, the reason for requesting an analysis is that the feed is suspected of causing sickness or death of livestock or poultry. While in very rare instances the feed may have caused the trouble, disease is usually found to be the cause. Often feeders, suspecting the feed, lose valuable time in the treatment of the disease by sending a sample of the feed for analysis and waiting for the report. Losses could have been reduced had a veterinarian or poultry specialist been consulted immediately and proper treatment given promptly. The most conclusive method of determining whether or not the feed is the cause of the trouble is a biological test. Such a test can be conducted on the premises of the feeder. If the feed is suspected, confine in sanitary pens two lots of healthy chicks. Give to one lot the suspected feed and to the other lot a feed known to be good. Should the chicks receiving the suspected feed become ill and the others remain healthy, there is evidence that the feed is the cause. Under such circumstances, notify the Feed Control Supervisor and an official sample will be drawn. The official sample will be analyzed to determine if the manufacturer is responsible.

The most common reason the purchaser has for asking to have the sample analyzed is to satisfy himself whether or not the feed meets its guarantee, and if it does not, to obtain evidence upon which to base a claim for shortage. The Station can assume no responsibility for the drawing of an unofficial sample but can attest only the accuracy of the analysis of the sample as submitted. It is practically impossible to secure a representative sample of a feedingstuff composed of several ingredients varying widely in composition without the aid of a sampling tube for drawing the sample and proper equipment for mixing it. A feed may contain as one of its ingredients gluten meal averaging 40 per cent protein, and as another ingredient oat mill feed averaging 5 per cent protein. These materials are so different in physical condition that the shaking in transit tends to separate them even though they may have been perfectly mixed by the manufacturer before bagging. It is apparent that an accurate sample of a shipment of a feed can only be had by drawing a core from several bags. Since a representative sample is as essential as an accurate analysis in judging the value of a shipment of feed, it is evident that a satisfactory adjustment can seldom be effected on the basis of an unofficial sample.

Notwithstanding the objections which may be raised to the analysis of samples taken without proper sampling equipment, the Station is disposed to continue this work as long as there is evidence that it constitutes a useful service. The samples so submitted should be drawn from at least ten bags in a manner which will insure that the small lot sent for analysis is as accurately representative as possible of the large lot from which it is taken. Because of the cost of laboratory work and materials, an analysis is not usually warranted on a sample drawn from less than a one-ton lot of feed.

A one-pound sample is sufficient for the analysis. It should be sent in a glass jar or tin box to prevent loss of fine particles and a change in the moisture content. In order that the department may have a record of the sample analyzed, and may know whether or not the manufacturer and the dealer are complying with the requirements of the law, the following information should be submitted concerning each sample.
